Project Concept Report – Page 3 County: Rockdale

#### PLANNING AND BACKGROUND

Project Justification Statement: Project Justification Statement: This project was initiated by the local government of Rockdale County. It is a two-to-four lane widening project intended to add capacity, increase mobility, and reduce potential for crashes on Sigman Road. A section of Sigman Road has already been widened to four lanes with a raised median from I-20 on the west side of Conyers to east of Lester Road. Also, Sigman Road through the intersection of SR 20 (Loganville Highway) is four-lanes. The project would result in a uniform typical section for Sigman Road throughout its length along the developed area north of I-20 to Dogwood Connector.

Sigman Road has conflicts between fast-moving peak-hour through traffic and local traffic attempting to access driveways and cross-streets, resulting in extreme delays and frequent traffic crashes. The proposed project would provide relief for this congestion and operational problems caused by the heavy traffic volumes associated with adjacent existing and expanding residential and commercial development.

Current traffic volumes range from 13,080 to 15,940 vehicles per day (vpd) and are projected to increase to 24,480 to 40,880 vpd by the design year 2045. Without improvement, five key intersections would be operating at capacity or failing Levels of Service (LOS E or F) under future 2045 no-build conditions. Widening of Sigman Road would improve the 2045 design year LOS at all intersections to an acceptable LOS D or better.

A reduction in traffic congestion and improvement of traffic operational movements at both signalized and unsignalized intersections would also in turn reduce the frequency and severity of crashes on Sigman Road. Crash and injury rates on sections of Sigman Road for years 2010, 2011 and 2012 are higher than the statewide averages for urban principal arterials similar to Sigman Road. An average of 58% of the crashes on Sigman Road are rear-end collisions. Rear-end collisions are an indicator of traffic congestion.

The project would also add context sensitive design improvements in the form of a multi-use path and a grassed median with potential for landscaping. The median would also serve to improve the safety and efficiency of the roadway by limiting left-turn movements and controlling access points.

The project limits for Sigman Road widening would begin 650 feet east of Lester Road, which is the end of a four-lane divided section and extend to Dogwood Connector. Dogwood Connector would be a logical terminus for the project. Sigman Road beyond Dogwood Connector is already four-lanes divided with an interchange at I-20 and would complete a four-lane northern loop around the City of Conyers. Because of funding constraints, the Sigman Road widening project is being funded under three P.I. Numbers: 0013163 - Sigman Road from 650 east of Lester Road to Irwin Bridge Road; 0013594 - Sigman Road from Irwin Bridge Road to SR 138; and, 752210 - Sigman Road from SR 138 to Dogwood Connector.

Rockdale County and the City of Conyers have plans to connect a multi-use trail around various parts of the city to provide greater east-west connectivity through the county and points beyond. Therefore, the widening projects (P.I. Nos. 0013163, 0013594 and 752210) will include a multi-use trail on the

Project Concept Report – Page 4 P.I. Numbers: 0013163, 0013594, 752210 & 0012886

County: Rockdale

north side of Sigman Road which would expand the existing multi-use trail system. P.I. No. 0012886 includes the funding for the multi-use trail from east of Lester Road to Irwin Bridge Road.

Existing conditions: Sigman Road has a posted speed limit of 45 miles per hour (mph), no paved shoulders, and has left turns and right-turn lanes at some of the major signalized intersections. Also, two through lane exists on Sigman Road in each direction through the intersection of SR 20 (Loganville Highway). Sigman Road serves as the most direct east-west facility for local and commercial traffic to access I-20. Sigman Road also serves as a major collection point for smaller east-west collector roadways that provide access into and out of City of Conyers, including Rockbridge Road, Irwin Bridge Road (CR 442), Loganville Highway, Milstead Road, Eastview Road and SR 138. Sigman Road is an urban principal arterial and has land uses that include Conyers Middle School, Rockdale Medical Center and hospital, a recreational complex with baseball fields, several churches, a church cemetery, residential subdivisions, shopping centers and industrial businesses.

There are several existing box culverts along this section of Sigman Road, but no bridges or significant retaining walls. Major utilities in the area include an underground gas or petroleum pipeline on easement crossing Sigman Road southeast of SR 138, and a power line easement that crosses Sigman Road 200' east of Rockbridge Road.

Other projects in the area: There are nine major transportation infrastructure projects programmed in the study area and contained within the Atlanta Regional Commission's (ARC's) TIP or RTP. They are described below.

- STP00-9336-00(001), P.I. No. 752270: Old Covington Highway from Green Street to SR 138/20 (Walnut Grove Road). The proposed project would widen the roadway from 2 lanes to 4 lanes. Engineering was authorized in fiscal year 2004 and right-of-way acquisition in 2007 and 2011. Construction is programmed for fiscal year 2014. The ARC TIP reference number is RO-034.
- 2. P.I. No. 721582: Salem Road Connector (Old Salem Road Realignment) Relocate intersection from the vicinity of SR 20/138 to south of I-20. Engineering was authorized in fiscal year 2006 and 2011. Right-of-way acquisition is programmed in 2018. Construction is programmed in fiscal year 2019. The ARC TIP reference number is RO-138C.
- CSSTP-0006-00(935), P.I. No. 0006935: SR 20 (Loganville Highway) at West Hightower Trail & Chandler Road. The proposed project would be an intersection improvement project. Engineering was authorized in fiscal year 2006 and 2011. Right-of-way acquisition is programmed in 2017 and construction is programmed in 2019. The ARC TIP reference number is RO-242C.
- P.I. No. 0011640: Hardin/O'Kelly Street Bicycle and Pedestrian Improvements from Dogwood Drive to Green Street. Engineering was authorized in fiscal year 2013. Right-of-way acquisition is programmed in 2015 and construction in 2017. The ARC TIP reference number is RO-248.
- NH000-0035-01(033), P.I. No. 731048: I-20 East Interchange Improvements at SR 138/20 (Walnut Grove Road/McDonough Highway). This project would include bridge and road widening from 4 to 6 lanes and ramp improvements. Engineering is programmed in fiscal year 2015. Right-of-way acquisition is programmed in 2018 and construction are programmed in long range (2020-2030). The ARC TIP reference number is RO-AR-138.
- 6. P.I. No. 0006934: Commerce Crossing/I-20 Overpass from Old Salem Road to Old Covington Highway. The project is approximately 0.4 mile in length. The project is programmed in long range (2020-2030). The ARC RTP reference number is RO-243.

P.I. Numbers: 0013163, 0013594, 752210 & 0012886

Project Concept Report – Page 5

County: Rockdale

7. Millers Chapel Road Widening from SR 138 to SR 20. This project would widen the roadway from 2 lanes to 4 lanes. The project length is approximately 0.6 mile. The project is programmed in long range (2020-2030). The ARC RTP reference number is RO-015F.

- 8. CSSTP-0006-00(931), P.I. No. 0006931: Sigman Road Extension/Hayden Quarry Road from DeKalb County Line to I-20 at Sigman Road. This project is approximately 0.9 mile in length. The project is programmed in long range (2031-2040). The ARC RTP reference number is RO-235A.
- 9. P.I. No. 0007869: SR 20 (Loganville Highway) from Sigman Road to Pleasant Hill Road. The proposed project would widen the roadway from 2 lanes to 4 lanes. The project length is approximately 7.1 miles. The project is programmed in long range (2031-2040). The ARC RTP reference number is RO-242A.

County: Rockdale

#### **DESIGN AND STRUCTURAL**

Description of the proposed project: This project, located in central Rockdale County and partially within the City of Conyers, would widen and improve approximately 6.26 miles of Sigman Road from just east of Lester Road to Dogwood Connector. The project is proposed to be constructed under four project numbers.

- P.I. No. 0013163 Sigman Rd. from 650 feet east of Lester Rd. to Irwin Bridge Road (1.3 miles)
- P.I. No. 0013594 Sigman Rd. from Irwin Bridge Rd. to 970 feet east of SR 138 (2.9 miles)
- P.I. No. 752210 Sigman Road from 300 feet east of SR 138 to Dogwood Connector (2.3 miles)
- P.I. No. 0012886 Multi-use trail funding from 650 feet east of Lester Road to Irwin Bridge Road

Sigman Rd. would be widened from two-lanes to four 12'-lanes separated by a 20' raised median. The shoulders would be upgraded to urban-type with curb and gutter. The left shoulder would be widened to 18' with a 10' multi-use path and the right shoulder would be widened to 12' with a standard 5' sidewalk.

Major Structures: There are a number of box culverts on Sigman Road as listed in the table below, but there are no bridges. Proposed retaining walls to reduce environmental impacts are shown in the table on Page 7.

Structure	Existing	Proposed
6' x 6'	- Located 250' west of Rockbridge Rd.	At this time, the existing
RCBC	- Length = 97'	culverts have not been
4' x 6'	<ul> <li>Located 900' northeast of Rockbridge Rd.</li> </ul>	evaluated to determine if
RCBC	- Length = 102'	they need to be
5' x 5'	- Located 3200' east of Irwin Bridge Rd.	reconstructed entirely or
RCBC	- Length = 107'	just lengthened. As design
66" CMP	- Located 2600' northwest of Loganville Hwy	progresses, each culvert will be evaluated based on
	- Length = 140'	its capacity to handle
6' x 8' DBL	- Located 2000' north of Eastview Rd.	anticipated flows and the
RCBC	- Length = 93'	physical condition of the
60" CMP	- Located 400' south of Eastview Rd.	structure itself. It is
	- Length = 284'	anticipated that all CMP's
4' x 6'	- Located 1500' southeast of SR 138	beneath the roadway will
RCBC	- Length = 96'	be replaced with RCP's or
66" RCP	- Located 2500' northwest of Gees Mill Rd.	RCBC's.

\*The 2 houses at the intersection with Old Camp Trail have the highest potential to be displacements because of the steep grade on Old Camp Trail and because Sigman Road has been shifted to that side to avoid a stream, but additional survey and design work would be necessary before making a final determination as to whether the homes must be displaced. Efforts will be made to avoid the displacements by constructing retaining walls and/or raising the roadway grade.

#### **CONTEXT SENSITIVE SOLUTIONS**

Issues of Concern: There are no context sensitive issues or concerns identified within the corridor.

Context Sensitive Solutions Proposed: This project is a collaborative effort between business and community leaders. Although there are not any specific context sensitive issues identified, the design will provide sidewalks and a multi-use path along Sigman Road within the project limits. These facilities will provide a context sensitive feature to the environment.

Is a PAR required? No Yes Completed – Date:  Environmental Comments and Information:  NEPA/GEPA: An Environmental Assessment (EA) will be prepared to reflect the current economic, environmental, cultural and social affects. All special studies will be conducted and completed in accordance with current GDOT standards.								
There are streams and wetlands along the project corridor that would have to be addressed. These resources were identified during the ecology field work and the proposed roadway alignment has been shifted and retaining wall locations identified to avoid and minimize impacts to these resources.  Ecology: Detailed field work was performed to identify streams and wetlands. Coordination with the Department of Natural Resources was completed in order to identify								
potential presence of protected species and/or habitats and any seasonal survey requirements.  History: A No Historic Resources Survey Report was completed for this project.								

Project Concept Report – Page 12 P.I. Numbers: 0013163, 0013594, 752210 & 0012886

County: Rockdale

**Archeology:** An archaeological field survey was conducted and a short form of negative findings was completed.

#### Air Quality:

Is the project located in a PM 2.5 Non-attainment area?	□ No	Yes
Is the project located in an Ozone Non-attainment area?	□ No	🛛 Yes
Is a Carbon Monoxide hotspot analysis required?	☐ No	Yes

The FY 2014-2019 Transportation Improvement Program (TIP) under the PLAN 2040 Regional Transportation Plan (RTP) is the current adopted plan for the Atlanta area showing the region's highest transportation priorities. It was adopted by the Atlanta Regional Commission (ARC) Board on March 26, 2014 with GRTA Board action on April 9, 2014. ARC received a conformity determination from the US DOT on April 30, 2014.

(See TIP sheets in Attachment #11.)

Air Quality Impact Assessment was conducted according to the latest GDOT policy effective December 20, 2012. CO, Ozone, PM  $_{2.5}$ , and MSATs were evaluated as part of this assessment. This project is consistent with the State Implementation Plan for the attainment of clean air quality in Georgia and would be in compliance with both state and federal air quality standards.

Noise Effects: Noise Impact Assessment was conducted using TNM in compliance with 23 USC Section 109(h) and (i) and according to the new GDOT Noise Abatement policy, effective July 13, 2011.

**Public Involvement:** A Public Information Open House (PIOH) is tentatively scheduled for the second week of October.

Major stakeholders: The following is a list of stakeholders that have been identified thus far: Rockdale County, City of Conyers, Conyers-Rockdale Chamber of Commerce, Rockdale Hospital, Conyers Middle School, Rockdale County Sheriff's Office, Rockdale County Fire Department, City of Conyers Police Department and traveling public.

Project Concept Report – Page 13 P.I. Numbers: 0013163, 0013594, 752210 & 0012886

County: Rockdale

#### CONSTRUCTION

Issues potentially affecting constructability/construction schedule:

Detours are not anticipated for stage construction. However there are 12 major box culverts that will be analyzed hydrologically during the preliminary design process to verify that they have sufficient capacity. If any of the major box culverts need to be replaced then detours are required at which time we will pursue public involvement.

In addition, there is an aerial power pole line running the length of the project requiring relocation that will further complicate the staging efforts.

Early Completion Incentives recommended for consideration: No Yes Early Completion Incentives are not anticipated at this time.

#### COORDINATION, ACTIVITIES, RESPONSIBILITIES, AND COSTS

Initial Concept Meeting: May 6, 2015, see attached minutes.

Concept Meeting: September 3, 2015, see attached minutes.

Other coordination to date: Two meetings have been held with Rockdale County to discuss the concept. The meetings took place on August 23, 2012 and August 28, 2013. The minutes of these meetings are included in the attachments of this report.

Project Activity	Party Responsible for Performing Task(s)
Concept Development	Rockdale County
Design	Rockdale County
Right-of-Way Acquisition	Rockdale County
Utility Coordination (Preconstruction)	Rockdale County
Utility Relocation (Construction)	Rockdale County, Utility Owners
Letting to Contract	Rockdale County
Construction Supervision	Rockdale County
Providing Material Pits	Contractor
Providing Detours	Contractor
Environmental Studies, Documents, & Permits	Rockdale County
Environmental Mitigation	Rockdale County
Construction Inspection & Materials Testing	Rockdale County

<sup>\*</sup>Reimbursable Utility Costs only

#### ALTERNATIVES DISCUSSION

Alternative selection: Three alternatives were studied along the Sigman Road corridor from east of Lester Road to Dogwood Connector. Below are descriptions of the alternatives that were evaluated.

Estimated Property Impacts:	0	Estimated Total Cost:	\$0
Estimated ROW Cost:	\$0	Estimated CST Time:	N/A
		cause it does not meet the ne	
Alternative 1: Alternative 1 consis	sts of symmetric wide	ening of the existing roadwa	
of the project to relieve traffic conger Alternative 1: Alternative 1 consists proposed roadway centerline match Estimated Property Impacts:	sts of symmetric wide	ening of the existing roadwa	

Rationale: This alternative was not selected due to its significant impacts to environmental resources, particularly streams and wetlands which would require an Individual 404 permit and the PAR process at the cost of additional time and expense. Additionally, right-of-way and utilities would be further impacted by this alternative. Therefore, the cost of both right-of-way and utility relocation would be higher than Alternative 2.

Alternative 2: Alternative 2 (Preferred Alternative) consists of asymmetric widening of the existing roadway. Under this alternative, the proposed roadway alignment is independent of the existing road.

Estimated Property Impacts:	109	Estimated Total Cost:	\$72,087,560.68
Estimated ROW Cost:	\$7,909,000	Estimated CST Time:	24 months

Rationale: This alternative is preferred due to its avoidance and minimization of stream and wetland impacts. The asymmetric widening allows the roadway alignment more flexibility to avoid environmental resources. Although the construction cost is slightly higher due to the increased number of retaining walls, the reduced schedule time and associated engineering costs justifies the selection of this alternative as the Preferred Concept.

<sup>\*\*</sup>CST Cost includes: Construction, Engineering and Inspection, and Liquid AC Cost Adjustment.

<sup>\*\*\*</sup>PE cost of P.I. No. 0013163 is the contracted amount. PE cost of P.I. Nos. 012886, 0013594 & 752210 are the amounts shown in the current ARC TIP.

#### REASONS FOR COST INCREASE AND CONTINGENCY JUSTIFICATION:

THE PROJECT TYPE IS RECONSTRUCTION/REHABILITATION ADDED CAPACITY. THE MID POINT CONTINGENCY OF 15% WAS USE DUE TO THE PROJECT'S POTENTIAL FOR INCREASED COSTS FOR RETAINING WALLS TO AVOID ENVIRONMENTAL RESOURCES. THE CONSTRUCTION, ROW, AND UTILITY COSTS OF THE MULTI-USE TRAIL ON THIS PROJECT IS BEING FUNDED THROUGH P.I. NO. 0012886.

# DEPARTMENT OF TRANSPORTATION STATE OF GEORGIA

## INTERDEPARTMENT CORRESPONDENCE

FILE P.I. No.	752210-	OFFICE	Program Delivery					
PROJECT DESCRIPTION								
SIGMAN RD FM OI LEG)	LD COVINGTON NORTH TO SR 20/13	8 (EAST DATE	October 22, 2015					
			L					
From: Albert V. S	Shelby, III, State Program Delivery Engine	mberg Naskit	1700					
To: Lisa L. My	ers, State Project Review Engineer							
Subject: REVISION	NS TO PROGRAMMED COSTS							
DO OVECTE MANAGEMENT		MGMT LET DATE						
PROJECT MANAGI	ER Xavier James	MGMT ROW DATE						
PROGRAMMED C	OSTS (TPro W/OUT INFLATION)	LAST	ESTIMATE UPDATE					
CONSTRUCTION	\$ 6,078,000.00	DATE	3/3/2004					
RIGHT OF WAY	\$ 1,971,000.00	DATE						
UTILITIES	\$	DATE						
REVISED COST ESTIMATES								
CONSTRUCTION*	\$ 18,858,128.01							
RIGHT OF WAY	\$ 2,794,000.00							
UTILITIES	\$ 5,950,367.00							
*Cost Contains	15 % Contingency							
REASONS FOR CO	OST INCREASE AND CONTINGENC	Y JUSTIFICATION:						

THE PROJECT TYPE IS RECONSTRUCTION/REHABILITATION ADDED CAPACITY. THE MID POINT CONTINGENCY OF 15% WAS USE DUE TO THE PROJECT'S POTENTIAL FOR INCREASED COSTS FOR RETAINING WALLS TO AVOID ENVIRONMENTAL RESOURCES.

## **CONTINGENCY SUMMARY**

A. CONSTRUCTION COST ESTIMATE:	\$ 15,350,478.86	Base Estimate From CES
B. ENGINEERING AND INSPECTION (E & I):	\$ 767,523.94	Base Estimate (A) x 5 %
c. CONTINGENCY:	\$ 2,417,700.42	Base Estimate (A) + E & I (B) x  See % Table in "Risk Based Cost Estimation" Memo
D. TOTAL LIQUID AC ADJUSTMENT:	\$ 322,424.79	Total From Liquid AC Spreadsheet
E. CONSTRUCTION TOTAL:	\$ 18,858,128.01	(A + B + C + D = E)

## REIMBURSABLE UTILTY COSTS

UTILITY OWNER	REIMBURSABLE COST
Georgia Power Transmission	\$150,000.00
Georgia Power Distribution	\$4,879,505.00
Snapping Shoals EMC	\$890,862.00
Williams/Transco Pipeline	\$30,000.00
TOTAL	\$ 5,950,367.00
ATTACHMENTS:	
Detailed Cost Estimate Printout From CES	
Liquid AC Adjustment Spreadsheet

Hi Karla,

I have reviewed your utilities cost estimate for the above projects. I approve your utilities cost estimate and if you need further assistance please contact be below.

#### Thanks

Wade Woodard Georgia Department Of Transportation District Seven Metro Utilities Engineer Serving: DeKalb & Rockdale Counties

Subject: P.I. Nos. 0013163, 752200 & 752210 (Rockdale County) - Sigman Road

#### Hi Wade,

You previously approved the utility estimates for this project on July 25, 2014, however the project number has changed and the last project number (752210) was left off of the email for approval. Attached is the Utility estimates. Could you send another email of approval with all the right P.I. Nos. so that I can include it in the attachments of the concept report.

Thanks, Karla

<sup>&</sup>lt;sup>1</sup>Analysis used Synchro 8 Software, which uses HCM methodology.

<sup>&</sup>lt;sup>2</sup>Signalized intersections are indicated by bold typeface. All other intersections are stop-controlled. LOS for un-signalized intersections is for the stop-controlled (side street) movement. LOS for signalized intersections is the weighted average of all movements

<sup>\*</sup>Renaissance Drive may require traffic signals. LOS with traffic signals shown in parenthesis.

# Attachment 7 Concept Hydrology Study for MS4 Requirements

# MS4 Requirements – Concept Level Sigman Road Widening Project PI Nos. 0013163, 752200 & 752210, Rockdale County

Blue line streams from USGS topographic maps and county GIS and minor streams located by the Moreland Ecology Department are shown on the concept plan.

Wetland areas are shown on the concept plan. NWI locations are shown and have been field verified by the Moreland Ecology Department.

#### Area 1 Station 1117+00 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the beginning of the project to the existing 42" culvert near 1117+30.

New Impervious Area	1.87	Acres
WQv=	0.187	acre-ft
WQv=	8146	Cubic Ft
Permanent Poolv=	4073	Cubic Ft
CPv=	24438	Cubic Ft
25-year detention	12219	Cubic Ft
Total Volume	36657	Cubic Ft
Length	96	Ft
Width	64	Ft
Depth	6	Ft

# Area 2 Station 1117+00 Right

The widening of Sigman Road occurs on the right side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the beginning of the project to the existing 42" culvert near 1117+30.

This area will be treated with a wet detention pond.

New Impervious Area	0.90	Acres
WQv=	0.09	acre-ft
WQv=	3920	Cubic Ft
Permanent Poolv=	1960	Cubic Ft
CPv=	11760	Cubic Ft
25-year detention	5880	Cubic Ft
Total Volume	17640	Cubic Ft
Length	68	ft
Width	45	ft
Depth	6	ft

#### Area 3 Station 1118+00 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the existing 42" culvert near station 1117+30 to the high point near station 1120+00.

This area will be treated with an enhanced swale.

New Impervious Area	0.29	Acres
WQv=	0.029	acre-ft
WQv=	1263	Cubic Ft
CPv=	3789	Cubic Ft
Total Volume	5052	Cubic Ft
Length	225	ft
Width	15	ft
Depth	1.5	ft

# Area 4 Station 1118+00 Right

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the existing 42" culvert near station 1117+30 to the high point near station 1120+00.

This area will be treated with an enhanced swale.

New Impervious Area	0.11	Acres
WQv=	0.011	acre-ft
WQv=	479	Cubic Ft
CPv=	1437	Cubic Ft
Total Volume	1916	Cubic Ft
Length	175	ft
Width	8	ft
Depth	1.5	ft

#### Area 5 Station 1122+50 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1120+00 to the 6x6 box culvert near station 1122+50.

This area will be treated with an enhanced swale.

New Impervious Area	0.27	Acres

#### Area 6 Station 1122+00 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1120+00 to the 6x6 box culvert near station 1122+50.

This area will be treated with an enhanced swale.

New Impervious Area	0.08	Acres
WQv=	0.008	acre-ft

Depth	1.5	ft

# Area 7 Station 1122+50 Right

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway.

Due to the proximity of the existing buildings, no water quality facility can be constructed in this area.

#### Area 8 Station 1122+50 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway.

Due to the proximity of the stream and the side road, no water quality facility can be constructed in this area.

#### Area 9 Station 1125+50 Left

The widening of Sigman Road occurs on the right side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1128+50 to the intersection near station 1125+00.

This area will be treated with an enhanced swale.

New Impervious Area	0.14	Acres
WQv=	0.014	acre-ft
WQv=	610	Cubic Ft
CPv=	1830	Cubic Ft

# Area 10 Station 1125+50 Right

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway.

Due to the proximity of the electrical transmission line and the side road, no water quality facility can be constructed in this area.

#### Area 11 Station 1134+50 Left

The widening of Sigman Road occurs on the left side of the center line. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway.

Due to the historical property located in this drainage area, no water quality facility can be constructed in this area.

# Area 12 Station 1134+50 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drains is from the high point near station 1128+50 to the 4'x6' box culvert near station 1134+50.

This area will be treated with a wet detention pond.

Total Volume	4311	Cubic Ft
Length	33	ft
Width	22	ft
Depth	6	ft

# Area 16 Station 1151+25 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1147+00 to the 30" culvert near station 1151+25.

Due to the proximity of the existing buildings, no water quality facility can be constructed in this area.

#### Area 17 Station 1151+50 Left

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the 30" culvert near station 1151+25 to the high point near station 1160+00.

New Impervious Area	0.45	Acres
WQv=	0.045	acre-ft
WQv=	1960	Cubic Ft
Permanent Poolv=	980	Cubic Ft
CPv=	5880	Cubic Ft
25-year detention	2940	Cubic Ft
Total Volume	8820	Cubic Ft
Length	48	ft
Width	32	ft
Depth	6	ft

#### Area 18 Station 1151+50 Right

The widening of Sigman Road occurs on the left side of the center line. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the 30" culvert near station 1151+25 to the high point near station 1160+00.

During the design phase, consideration should be given to the prospect of acquiring detention pond #1 and expanding its foot print to provide water quality treatment in this area.

This area will be treated with a wet detention pond.

New Impervious Area	0.83	Acres
WQv=	0.083	acre-ft

Width	41	ft
Depth	6	ft

### Area 44 Station 1354+50 to Station 1361+00 Left and Right

This area is located between two culvert crossing and streams. Due to the location of the streams and an existing commercial/industrial building no water quality structures can be constructed in this area.

### Area 45 Station 1361+00 Right

The widening of Sigman Road occurs to the left of the centerline. Water Quality treatment is provided for new impervious areas. Due to topography it is assumed that no cross drain pipes would be able to shift water from the left to the right side of the roadway. The area drained is from the high point near station 1388+00 to the 60" culvert near station 1361+00.

### **MEETING MINUTES**

Project:	Sigman Road Widening	Meeting Date	August 22,2012
		MA Project No.	
<b>Meeting:</b>	Kick-Off Meeting	CC: File	
<b>Location:</b>	Rockdale County		
Prepared By:	ВМН		
Prepared On:	August 23, 2012		

ATTENDEES	ORGANIZATION	E-mail
Brad Hale	Moreland Altobelli	bhale@maai.net
Miguel Valentin	Rockdale County DOT	miguel.valentin@rockdalecounty.org

The purpose of the meeting was to discuss the new contract

### Items Discussed

- Wanted TIA funding for this project.
- Want concept for everything, then will do design from Lester to Irwin (Ph1)
- 2 intersections are ready to go to construction; not designed for widening (outside of Ph1)
  - Move forward or wait? County wants to move forward.
  - Would like to take a preliminary look and at least move strain poles to ultimate location
  - County will send us plans
- Want to consider bike path. Either lanes or multi-use path.
  - Bike path on all 3 segments
  - Park & Ride Dogwood Connector
  - City's master plan includes bike path on Sigman
  - Part of Sigman is already on bike route.
  - Master plan has path along Covington Hwy
  - Want MA to make recommendation: bike lanes or multi-use path, need CST estimate
  - County will provide copy of city's master plan
- There is a culvert within the city's section that was a constraint (low point between Publix and Hospital)
- Section between 138 & Dogwood is on bad soil, significant fill; consider staging & replacing fill.
- County counted 18%-21% truck traffic at Sigman/ North Salem/ Old Covington. There is industry between 138 & Old Covington
- Salem/ 120 project did not meet "logical termini"
  - FHWA suggested extending into Sigman
  - County put job on hold
  - This Project will draw traffic from 162. 162 could be 6-lanes.
- Possible extension of bike path along Lester by others. County now looking at concept
- County only has 2-D GIS and aerial photography
- County will provide accident data

2211 Beaver Ruin Road, Suite 190 Norcross, Georgia 30071

Phone: 770-263-5945 Fax: 770-263-0166

### **MEETING MINUTES**

- CONCEPT: Aerial concept & report OK for deliverable.
- Property Issues? None that he knows of
- Utility Issues? There was an AT&T long lines at Sigman & Gees Mill Rd.
- Raised medians, sidewalks should be included
- County ok with 11' lanes but prefer 12'
- Phase 1 alone may have logical termini
  - Irwin Bridge is highest volume cross road
- 1 PIOH should be OK, but city may want another meeting.
  - 2-D display on aerial OK
- CONCERN: Meeting Construction schedule for Ph1 (FY2017)
  - BMH & County should kickoff preliminary design before CE approval
- County thinks they have most of the ROW they need for 4 lanes on Ph1
- May be a stream on north side
- Consider flush median in highly developed areas near 138 & hospital (the SR section of Sigman)
- With raised median look at U-Turn openings.
- Signals
  - No new locations come to mind
  - Rockbridge, maybe, none in Ph1
  - Not wild about roundabouts
- Email & Update Schedule
- *Need to send letters to Property owners*

2211 Beaver Ruin Road, Suite 190 Norcross, Georgia 30071

Phone: 770-263-5945 Fax: 770-263-0166

### **MEETING MINUTES**

Project:	Sigman Rd. Widening & Improvements	Meeting Date	8/28/13
	PI #'s 752190, 752200, & 75220, Rockdale County	MA Project No.	ROCK1203
<b>Meeting:</b>	<b>Concept Coordination Meeting</b>	CC: File ROC	K1203
<b>Location:</b>	RDOT Conference Room		
Prepared By:	Will Sheehan		
Prepared On:	August 29, 2013		

ATTENDEES	ORGANIZATION	EMAIL
Miguel Valentin	Rockdale County DOT	miguel.valentin@rockdalecounty.org
Brad Hale	MAAI	bhale@maai.net
Will Sheehan	MAAI	wsheehan@maai.net

The purpose of this meeting was to discuss the concept alternatives for the Sigman Rd. Project in central Rockdale County. MA provided an overall, aerial display of Alternative 2 – the Preferred Concept – as a visual-aid. The key points of the meeting are summarized below.

MA evaluated and presented two concept alternatives (and no-build scenario) as described below.

### Alternative 1

This alternative consists of widening the road symmetrically, such that the proposed centerline matches the existing centerline. This alternative results in significant environmental impacts, particularly to streams and wetlands, that would require an Individual 404 Permit at the cost of additional time and expense.

### Alternative 2

This alternative consists of asymmetrical widening where the proposed centerline is independent of the existing, allowing the roadway alignment to shift to avoid the significant stream and wetland impacts associated with Alternative 1. Alternative 2 is slightly more expensive than Alternative 1 due to the additional retaining walls that are necessary to reduce impacts; however, Alternative 2 would not require an Individual 404 Permit and is the Preferred Concept Alternative.

- Rockdale County (Miguel) agreed with MA that we should move forward with Alternative 2.
- At Old Camp Trail, the Alt 2 alignment for Sigman Rd. is shifted to the north to avoid a stream. This shift could potentially displace the two properties on the corners. MA will design the improvements to try to avoid the two displacements through the use of retaining walls, raising the roadway grade, or a combination thereof. Old Camp Trail has a steep 12% up-grade.
- MA provided copies of Project Need, Effectiveness, and Logical Termini Justification Form, Draft Concept Report (75% complete), and concept layout for Alternative 2. County would like for MA to go ahead and submit Logical Termini Justification Form and Traffic Study to GDOT for approval.
- The County has submitted schedule to GDOT. MA will contact Darrell Dejean, GDOT PM, to make sure baseline schedule
  has been set up in GDOT's system.
   Darrell was contacted on 8-29-2013 and stated that baseline schedule would be approved in roughly one month (around
  first of October).
- County would like the three current phases to be named Phases 2, 3 & 4. The already-constructed portion from I-20 to Lester Rd. is considered Phase 1. Phase 2 would come next with R/W currently slated for FY 2015.

2211 Beaver Ruin Road, Suite 190 Norcross, Georgia 30071

Phone: 770-263-5945 Fax: 770-263-0166

### MEETING MINUTES

- County requested fee estimate for Phase 2 engineering (Lester Rd. to Irwin Bridge Rd.). This work would begin in January
  according to our current schedule.
- County stated their preference for a CE document instead of a more-involved EA. The Phase 1 section from I-20 to Lester was done as a CE. MA stated that, based on previous experience, FHWA would require an EA for a project such as this, but that MA would move forward and push for a CE. The EA would add another year or so to the schedule. Most of that would be review time.
- There are three traffic signal projects along Sigman Rd. that are either already under or will soon be under construction. The locations are listed below.
  - At Sarasota Business Pkwy, existing two-way stop on cross-street to be upgraded to signal.
  - At Gees Mill Rd., existing four-way stop to be upgraded to traffic signal.
  - At Old Covington Hwy, existing traffic signal to be modified. County measured 18% truck traffic at this intersection.
- County indicated that there is shallow rock on west side of project and poor soil conditions/distressed pavement on the east side from SR 138 to I-20.
- There is an existing multi-use path on Irwin Bridge Rd. County wants connectivity to Park & Ride Lot on Lester Rd. that will be provided by the proposed 10' multi use path.
- There are a few new industrial developments under way on the east side around Gees Mill Rd.
- County mentioned possible use of bottom-less culverts. MA mentioned that single span bridges may be a comparable alternative to bottom-less culverts from an economical and environmental standpoint.
- MA described new MS4 Hydrology Study that is now required for GDOT Concept Reports. County asked that this work be included in Phase 1 fee estimate as contingency.
- County requested PowerPoint slides of the overall project and each phase.
- Phase 4 has high truck traffic. It is in industrial area.
- Miguel requested that he be copied on all project correspondence.

### **ACTION ITEMS**

- MA to contact Darrell Dejean re: baseline schedule.
- MA to move forward with Alt 2.
- MA to submit traffic study to GDOT.
- MA to submit fee estimate for Phase 2 to County.

### **Minutes of Concept Team Meeting**

LN Manchi	MAAI	404-931-3792	lmanchi@maai.net
Karla Poshedly	MAAI	770-263-5945	kposhedly@maai.net

Mr. Xavier James identified the project and stated its description. He noted that right-of-way is anticipated to be scheduled for 2017 and construction in 2018.

Mr. LN Manchi then discussed the background and history of this project, the scheduling, the cost responsibilities, and the phasing of construction. He stated that project #0013163 is currently in the TIP for PE, ROW and construction with Xavier James as the GDOT project manager. Projects #752200 & 752210 have PE programmed in the TIP with local funding so that the environmental special studies and document could be reviewed by FHWA. Rockdale County plans to design and environmentally clear all three segments of the project and plans to let to contract each project as construction funds become available.

Ms. Karla Poshedly presented the concept layout, stating the need and purpose, project justification, typical section and other features of the project.

Questions and answers were made informally during Ms. Poshedly's presentation. Below are comments that were made during the concept team meeting.

- Expand the Project Justification Statement to include some specifics of Average Daily Traffic Volumes (ADT's), Levels of Service (LOS's) and crash data on Page 3 of the concept report for both no-build and build scenarios. Also, mention economic development and growth in the area and identify points of interest, such as schools, parks, community center, emergency services etc.
- Change the standard and proposed design vehicle on Page 7 from WB 62 to WB 67 as the project is close to I-20.

- Off-site Detours Anticipated: check the box "undetermined" instead of "yes". Off-site
  detours would be difficult because of the schools, emergency services, etc. If off-site detours
  are needed for this project, a detour meeting and report will be required. It was indicated by
  the attendees that the PIOH meeting is a good opportunity to discuss any detours that are
  known at the time.
- Check "yes" for median usage in the Design Variance table and place a note under the table explaining where and why a design variance will be needed. The second median opening at Conyers Middle school will be needed for school buses to circulate into and out of the school.
- Contact Paul Tanner in the GDOT Office of Transportation Data to determine if whether a temporary state route would be needed for construction on Sigman Road.
- Check information pertaining to GRTA Express Bus Services in the study area.
- Update traffic year in the pavement design.
- Add Williams/Transcontinental pipeline to the list of utility involvements.
- List the anticipated number of impacted parcels separately under each P.I. Number.
- Check "yes" for the box indicating the need for a CWA Section 404 Permit and indicate that the permit type would be NWP 14.
- Place the word "unknown" in the remarks for Buffer Variance.
- Check "no" for the box related to FEMA clarifying that there would be no FEMA coordination required for this project.
- Summarize the explanation of the projects in the TIP and RTP in a table format.
- State May 6, 2015 as the date of the Initial Concept Meeting and indicate that the minutes are attached.
- Add utility owners to the list of responsible parties for utility relocation.
- Change GDOT to Rockdale County as the responsible party for Letting to Contract.
- Change GDOT to Rockdale County as the responsible party for Construction Supervision.
- Change GDOT to Rockdale County as the responsible party for Environmental Mitigation.
- Change GDOT to Rockdale County as the responsible party for Construction Inspection & Materials Testing.
- Separate the project costs for each P.I. Number and show the 80/20 split for federal and local matching funds where applicable.
- It was mentioned that the PFA was not prepared as the project was scheduled to be a local let project.
- Verify that the utility costs only include the reimbursable costs.
- Modify the layout to include improvements on the side streets and the location of existing traffic signals. Traffic study to include this information.
- Evaluate the possibility of reducing the sidewalk and shoulder widths of the project and determine if it can be reduced to save costs and reduce right-of-way impacts.

Brad Hale	MAAI	770-263-5945	bhale@maai.net
Karla Poshedly	MAAI	770-263-5945	kposhedly@maai.net

After introductions, Mr. Xavier James identified the project and stated its description. He noted that the right-of-way for P.I. No. 0013163 is anticipated to be scheduled for 2017 and construction in 2018.

Mr. LN Manchi discussed the changing of the P.I. Numbers to clarify the project description and funding. He discussed the limits of the multi-use path and explained that P.I. No. 0012886 would be used to fund the multi-use path from east of Lester Road to Irwin Bridge Road.

Mr. Miguel Valentin, Transportation Director for Rockdale County, offered the following introduction to the project. He stated that the project has been in the works for many years; starting in the 1990's and is a priority project for the County. The initial phase was built in the 1990's and the remaining phases have not advanced due to funding constraints. However, the County's goal is to deliver the entire project over time as funding becomes available.

Ms. Karla Poshedly then presented the project justification, other projects in the area, traffic projections, functional classification, design criteria, utilities and other features of the project. She also discussed intersection improvements other than the Sigman Road widening which included:

- double left-turn lanes from eastbound Sigman Road to northbound SR 20
- double left-turn lanes on southbound SR 20 to eastbound Sigman Road
- double left-turns on SR 138 northbound and southbound

Mr. Manchi then explained the environmental studies to date and the permits that would be required for this project.

Mr. Brad Hale discussed construction and possible detours. He said detours are not anticipated for this project. However, there are 10 culverts on this project that will need to be evaluated to determine whether these culverts would have sufficient capacity and would not be replaced. If replacement is required, then a detour plan would be prepared and presented to the public and implemented during construction.

Ms. Poshedly then discussed the cost estimates, alternatives that were considered and project layout.

Questions and answers were made informally during Ms. Poshedly's presentation. Below are comments that were made during the concept team meeting.

- Include lighting costs in the construction costs.
- Obtain a letter of support for lighting. Discuss with Walt Taylor of GDOT. Include letter in Attachments of the concept report.
- Show lighting on typical section.
- P.I. No. 0012886 will only include the cost of the concrete for the trail. ROW and grading will be part of the Sigman Road widening P.I. No. 0013163.
- Look at walls verses ROW for cost savings when designing the multi-use path.
- Break out the cost estimate of the multi-use path in the Summary of Cost table on Page 14.
- Label the multi-use path on the typical section.
- Change P.I. No. on ROW table on Page 10.
- Show \$0 ROW for P.I. No. 0013163 on ROW table on Page 10.
- Revise text in construction section relating to detours on Page 13.
- Change P.I. No. in Cost Estimate Summary Table on Page 14.

There were no comments from GDOT Planning and Utilities Departments that attended.
